Appendix A

- Table 1 Wetlands in Ohio and West Virginia
- Table 2 Surface Waters in Ohio and West Virginia
- Table 3 Ponds in Ohio and West Virginia
- Table 4 Drainages in Ohio and West Virginia

Appendix B – USACE Routine Wetland Determination Data Sheets

Appendix C – Wetland and Waters Delineation Maps

Appendix D – Photos

## **LIST OF ACRONYMS**

cm	centimeter
CWA	Clean Water Act
GPS	Global Positioning System
NRCS	Natural Resources Conservation Service
NWI	National Wetlands Inventory
OHWM	Ordinary High Water Mark
PAB	Palustrine Aquatic Bed
PEM	Palustrine Emergent
PFO	Palustrine Forested
Project	Rover Pipeline Project
PSS	Palustrine Scrub-Shrub
PUB	Palustrine Unconsolidated Bottom
Rover	Rover Pipeline LLC
U.S.	United States
USACE	United States Army Corps of Engineers
USDA	United States Department of Agriculture
USGS	United States Geological Survey

## **1.0 INTRODUCTION**

Rover Pipeline LLC (Rover) will be seeking to construct, own, and operate the proposed Rover Pipeline Project (Project). The Rover Pipeline Project, as currently proposed, is a new natural gas pipeline system that will consist of approximately 713 miles of Supply Laterals and Mainlines, 10 compressor stations, and associated meter stations and other aboveground facilities that will be located in parts of West Virginia, Pennsylvania, Ohio, and Michigan. The Project will extend from the vicinity of New Milton, Doddridge County, West Virginia to Livingston County, Michigan.

This Addendum 1 to the original report<sup>1</sup> identifies the waters of the U.S. delineated within the proposed Project area between November 1, 2014 and May 12, 2015. The Project occurs within the United States Army Corps of Engineers (USACE) Pittsburgh, Buffalo, and Huntington Districts, as well as Michigan where the Project is under the jurisdiction of the Michigan Department of Environmental Quality (MDEQ). However, this report describes only those Waters of the U.S. delineated within the Huntington District in Ohio and West Virginia. The Project as currently proposed still consists of the following components and facilities within the USACE Huntington District:

- The Mainline, and Supply Connectors A and B in Ohio;
- Eight Supply Laterals: Burgettstown, Cadiz, Clarington, Seneca, Berne, Sherwood, and Sherwood to CGT in West Virginia and Ohio;
- Five new Compressor Stations (CSs): Mainline CS 1 in Carroll County, Mainline CS 2 in Wayne County, Cadiz CS in Harrison County, and Seneca CS in Noble County, Ohio; and Sherwood CS in Doddridge County, West Virginia; and
- Various new valves, receipt and delivery meter stations, and receiver sites.

## **2.0 METHODS**

The survey methods used to identify and delineate the waters of the U.S. provided in this addendum report are consistent with the methods provided in the original report. The study area generally consisted of a 400-foot-wide corridor along the proposed pipeline route, 100 percent of the permanent footprint and temporary workspaces for aboveground facilities, and a 50-foot wide corridor along proposed access roads.

This addendum report documents the wetlands and waters potentially under federal and/or state jurisdiction that were identified in the survey area after November 1, 2014; however, not all of these waters will necessarily be impacted by the Project. Summary tables of wetlands and waters that were identified are provided in Appendix A. USACE Routine Wetland Determination Data Sheets are included in Appendix B, wetland and waters delineation maps are included in Appendix C, and photos of delineated resources are included in Appendix D.

### **3.0 RESULTS**

The tables provided in Appendix A summarize characteristics of the additional wetlands, streams, waterbodies, and drainages that were identified and delineated in the Project area within the USACE Huntington District during the additional surveys. The types of wetlands and waters delineated during the additional field surveys were similar to those described in the original report.
