1 Milepost (MP) at entry point of waterbody. Note: The same waterbody may be crossed by pipeline facilities more than once.

2 All waterbodies are crossed using the open-cut crossing method, with the exception of those that are crossed via HDD (denoted with an asterisk (*) next to the Waterbody Name; UT = Unnamed Tributary; Unnamed = unnamed waterbodies or ponds.

3 Waterbody crossing width based on field estimated distance of the Ordinary High Water (OHW). For USGS NHD-identified waterbodies (identified based on the lack of a Waterbody ID), scaled aerial imagery was used to estimate crossing length for these features.

Note: Two (2) waterbodies listed under Supply Connector Line B facilities represent those crossed by the centerline of Supply Connector Line B only. These waterbodies are not crossed by the centerline of Supply Connector Line A. Four (4) waterbodies listed under Mainline B facilities represent those crossed by the Note: Data in this table reflects surveys through May 2015. Survey data was supplemented with perennial waterbodies identified using USGS topographic maps; these waterbodies are represented by a " - " under the Waterbody ID.
